Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The novel beat-like subunit is useful for producing a cherapeutic agent which is useful treating pain in a patient. The subunit can be expressed by standard reconstants methodology. The presents a quanto a person of the man movel sodium channel betal-like

                                                                                                                                                                                                                            The present esquence is given in the claims of a specification relating to a novel family of beta sub-unit proceins from a voltage-gated sodium channel, Human and rat beta sub-units, which have been collectively identified as beta) have been isolated. The polymelostices and optopepticated are useful for screening for agonistic and anteologists of oddium channels. The agonistic, antegonists or conditions associated with voltage-gated sodium channels. Greating diseases or conditions associated with voltage-gated sodium channels, e.g. pain, wonchronwaftin paragnajionae, phenylercome, inchannels, henylercome, inchannels, henylercome, inchannels, and Charlow inchannels.
                                                                    Novel nucleic acids encozing a beta-3 subunit from a voltage-gated sodium channel, and their corresponding polypeptides, useful for desecting and treating sodium channel-associated conditions, e.g. pain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 EWFYRPEGGKDFLIYEYRNGHQEVESPFQGRLQWNGSKDLQDVSITVLNVTLNDSGLYTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                The present involtion describes seasonlages and computer readable media comprising novel human cDNA sequences and clones destruct forest living the forest livering forest livering the control part of the present invention which encode the proteins given in ABBOGSE to the ABBOGSE. The human CDNA sequences and clones can be used in sequences the retrained by the used in a variety of applications, for example they may be used in a variety of applications, for change they may be used in prefit as a variety of applications, for change they may be used in prefit as a variety of applications, for change they may be used in prefit as a variety of applications, for change they may be used in prefit ling assays, for providing large arrays of human genetic meterial for implementing large-scale screening exartegies and for treating diseases via gone therapy procedures.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NVSREFERENHRPFVKTTRLIPLRVTBEAGEDFTSVVSBINMYILLVFLYLWLLIEMIYC 180
                                                                                                                                                                                                                                                            The invention relates to polymocleotides (AMX185-AMX183) and the cenceded polygeptides (AMY1832)-AMM1801031 that eachibit activity elating copyokine, cell proliferation or cell differentiation or which may induce production of other optokines in other cell populations. The polymocleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various syrokine-like activities, est one cell growth factor activity, haemstopoists regulating activity, itsue growth factor activity, haemstopoists argulating activity, itsue growth factor activity, immunomodulatory activity and activity, itsue activity and may be useful in the disponsis and/or frequency.                                                                                                                                                   The present invention provides the protein and coding sequences of the rat sodium channel betal procein, designated Airava946. This protein is involved in the generation of pain and other sensory or perceptive nerve inpulses, in the sexablishment and endurance of mod, mentodegenerative and sides placeders, and in the control of muscle contraction, including movements such as the heartbark, delgestion and vascular cone. The sequences can be used in predictive medicine, screening and diagnostic

The invention relates to isolated polymuchocide (I) and conjugation relates to isolate polymuchocide (I) and conjugation relates to isolate by the product disease that restrict (RI) is insection (RI) primers of ligorates and for chromosome only disease and such control and the recombinant production of (III). The chromosome of the charitage of the sale owed in diagnostics as expressed sequence tags for identifying a polymers and insecting antibodies against it, detecting or control articly of (III) or to test disease states involving a confinitely a polyped in trissue, as an obscular testing many testing a polyped in trissue, as an obscular testing many testing and the binding partners are useful in medical angular products involving and testing became (III) or to the confinite and polymuchecide sequences have applications in the polypepic and polymuchecide sequences have applications in the polymorphic or genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and the produce dependent of sequences has and to produce other types of the same of the inventor.

Consideration of sequences of the invention.

Consideration of the sequence of the invention of the printed of the produce of the consideration of the printed of the produce of the inventor of the produce of the inventor of the printed of the produce of the inventor of the printed of the produce of the inventor of the printed of the printed of the printed of the produce of the inventor of the printed of the format discorder of the printed of the first expense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       127 MPAFNRLFPLASLVLIYXVSVCPPVWGEVPLENGGRARANPMKLRCISCMKREEVEATTV 186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            65 EBFVKILRYENEVLQLEEDERPEGRVVWNGSRGTKDLQDLSIFIINVTYNHSGDYQCHVY 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the procein and coding expenses of the true Rediam channel being procein, designated Altroship. This protein is involved in the generator of pain and other sensory or perceptive nerve impulses. At the establishment and endurance of mood, neurodeseneative and altespoins codercers, and in the control of muscle contraction, including movements such as the heartbest, dispection and vascular totion. The esquence can be used in predictive medicine, acreening and dispnostic assays, and in pharmacogenomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5 LAFVVGAALVSSAWGGCVEVDSETEAVYGMTFKILCISCKRRSETTAETFTEWTFRQKGT 64

The invention relates to a method of screening for a conditator of solium channel activity that computes contacting a candidate aboulator with a cell co-expressing a solium channel beeral a solumnint with a sodium channel atha submint, with a sodium channel atha solumnint with a sodium channel contact of the candidate modulator on the sodium channel function in the cell. The method is useful for identifying sodium channel activity modulators, preferably causing decreased beet a submit the expression. The modulators can be used to decrease neuropathic pain, and to decrease the number of febrile seitures in an individual. The present sequence expressions at the beautification is a beautification of the second correction and activities which the beautification is a submit, used in homology studies with the beautif submit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                70 KDFL-IYEYRNOHQEVESP--PQSRLOMNGS---KDLQDVSITVLAVVTLNDSGLYTCNVS 123

                                                                                                                                                                                                                                                                                                                                                                                 sodium channel, and their corresponding polypeptides, useful per a perception of the perception and treating sodium channel-associated conditions, e.g. pain, epilepsy and stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is given in a specification relating to a more latently of beets sub-unit proceins from a voltage-gated sodium channel. Human and rate bets sub-units, which have been collectively identified as the sai, have been isolated. The polymucleotides and polymptides are useful for escreening for agonists and antagonists of sodium channels. Hagonists, antagonists, proceins and moleic acids may be used diagnosing of treating diseases or conditions associated with that diseases, Jacobes Synthes, Panilial Insuring Contract, Statement and Charcot Maria Tricke, isochamia, what disease, Jacobes Synthes, Panilial Roberton Roberto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sodium channel; modulator; sodium channel beta-1A subunit; pain; rat; sodium channel beta-1 subunit; analgesic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8; Gaps

Picholater growth factor receptor bek prequesor — mouse
M.Alternate names bek transforming pyotekin; fibroblast growth factor receptor 2; kerat,
Contains, protein-tyrasine kinase (BC 2,7,1,112) bek
C. Species manaculas (house mouse)
C. Date 30 - Mn 199 species contains the mouse)
C. Accesson A4442, A3137 Ba, P.; Moscatelli, D.; Kormbluth, S.; Hanafusa, H.; Basilico,
